1 STUDY CONTEXT

1.1 INTRODUCTION

In September 2005, Ratio Consultants Pty Ltd was commissioned by Mid-Western Regional Shire Council to review housing and population projections for the Shire, taking account of four major projects which are planned for the Shire.

1.2 STUDY PURPOSE

The purpose of the study is to "update current population projections in light of future predicted projects including Wilpinjong Coal Mine, Moolarben Coal Mine, re-opening of the abattoir and the Bulgong-Mudgee Vineyard Resort". (Refer Consultant Brief, September 2005.)

1.3 OUTCOMES REQUIRED FOR THE STUDY

The Consultants were required to prepare projections of residential development, households and the resident population for each of the following geographic areas:-

- Mudgee Statistical Local Area (SLA);
- Mudgee township;
- Gulgong township;
- Rural areas (balance of areas in the Mudgee SLA);
- Rylstone SLA;
- Rylstone township;
- Kandos township;
- Rural areas (balance of areas in the Rylstone SLA);
- Whole of Mid-Western Regional Local Government Area (LGA).

Projections were required from 2005-2006 and for each census year through to 2021.

In addition, projections were required of the following life-cycle groups:-

- the infant population (persons aged 0-4 years);
- primary school-age children (persons aged 5-12 years);
- secondary school age children (persons aged 13-18 years);
- tertiary education/training age population (persons aged 19-24 years);
- young adults (persons aged 25-39 years);
- middle aged adults (persons aged 40-64 years);

- senior population (persons aged 65-79 years);
- elderly population (termed "frail aged", persons aged 80 years and over).

Further to the above outputs, projections were required of dwelling unit approvals for each of the above geographic areas, showing:-

- the underlying housing demand, excluding the four development projects;
- revised housing demand, including the development projects.

On the basis of the above projections, and housing allotment supply information to be provided by Council, an assessment was required of the residential land demand-supply balance and the extent to which additional residential land may be required to cater for the projected housing demand.

2 PRINCIPAL FINDINGS

The principal findings of the research are set out in this section. They encompass the following:-

- employment and housing effects of the four planned development projects assessed in this Study;
- long-term residential development "base-trends" in the Mudgee and Rylstone SLA's;
- conjoint effect of the development projects on housing demand in the Mudgee and Rylstone SLA's;
- household and population projections, taking account of the development projects;
- projected changes in the age structure of the residential population;
- gross residential land requirements, taking account of the development projects;
- current residential land supply in the Mudgee and Gulgong townships;
- additional residential land supply requirements at Mudgee and Gulgong;
- impacts on rental housing stock.

2.1 EMPLOYMENT AND HOUSING EFFECTS OF THE DEVELOPMENT PROJECTS

The Study investigated the employment and housing effects of four development projects planned for the Mid-Western Regional Shire. These are:-

- Wilpinjond Mine;
- Moolarben Mine;
- Re-opening of the Mudgee Regional Abattoir;
- Mudgee-Gulgong Vineyard Resort.

Table A.1 shows a summary of the assessed employment population and housing effects of the development projects. The assessed effects of the Wilpinjond Project have been taken from the Environmental Impact Statement (refer Wilpinjond Coal Project, Environmental Impact Statement, May 2005, Volume 5, Sections J2.3-J5, report by ResourceStrategies). Projected employment figures for the planned Moolarben Mine, the re-opening of the Mudgee Regional Abattoir and the Mudgee-Gulgong Vineyard Resort have been provided by Council.

Table A.1 was compiled as follows:-

- as indicated above, details of the direct and indirect employment and population effects of the planned Wilpinjond Mine, together with the assessed likely housing effects of this project (including effects on the rental housing market) were taken from the Wilpinjond Coal Project EIS (reference cited above);
- base permanent employment projections for the other three projects were as indicated above, provided by Council;

- Table A.1 was then developed, assuming that the relationship between additional population likely to be generated by these three projects, together with housing effects would be in proportion to the assessed effects set out in the Wilpinjong Coal Project EIS (i.e. that once the base permanent employment effects had been estimated, then both peak employment effects and population and aggregate housing effects could also be estimated on the basis of the research undertaken for the Wilpinjong Mine EIS and assuming similar relationships would exist in the other three projects between base employment, population and housing).
- The main section of Table A.1 shows the aggregate population and housing effects, together with effects on the residential rental market, for the Mudgee SLA. A sub-table at the foot of the main table shows the housing distribution assumptions for each of the development projects. The distribution assumptions for Wilpinjong were taken from the EIS document (cited above). The distribution assumptions for the other three projects were provided by Council.

The analysis of employment, population and housing effects likely to be generated by the development projects found that:

- The cumulative employment effect of all four projects is projected to be approximately 1,230 jobs (including direct and local area flow-on jobs) as a lower estimate; and 1,992 jobs as a higher estimate;
- The total population increase attributable to the four projects is projected to be in the range of 950-1,535 persons;
- Additional housing demand attributable to the projects is projected to be in the range of 461-757 dwelling units that will be developed in the Mudgee SLA ;
- The development projects will generate demands for approximately 163 dwelling units as rental accommodation.

The likely timescale for the projects to come into operation is set out in Figure 1. This shows that:

- Approvals are likely to be completed for the Wilpinjong Mine and the Mudgee-Gulgong Regional Vineyard Resort by 2005/06, and for the Moolarben Mine and the Mudgee Regional Abattoir during the financial year 2006/07;
- Two projects are likely to have completed their initial operational phase by 2007/08 (Wilpinjong Mine and the Mudgee Regional Abattoir). The Mudgee-Gulgong Regional Vineyard Resort is likely to have completed its initial operational phase by 2008/09, and the Moolarben Mine is likely to have an extended initial operational phase to 2009/10;
- The full operational phases for two of the projects (Wilpinjong Mine and Mudgee Regional Abattoir) are anticipated to commence in 2008/09; and the other two projects in 2009/10 (Mudgee-Gulgong Regional Vineyard Resort) and 2010/11 (Moolarben Mine).

A conservative view of the development projects' housing effects has been adopted. For the purposes of the assessments, it was assumed that the permanent effects on housing demand (as distinct from effects on the rental market or temporary accommodation) would likely be at the lower end of estimates shown in Table A.1 during the operational phase. Permanent housing demands were allocated over a five-year period from the initial operational phase. In addition, a longer-term housing multiplier effect equal to approximately 40% of the housing developed in the initial and full operational phases would be likely to be generated; that is, the projects would be likely to sustain a second round of housing investment attributable to the ongoing business and social effects of the initial wave of immigrants to the Shire.

The overall effect of both the initial and longer-term multiplier impacts on the housing market in the Mudgee SLA is set out in Table C.8. This table shows the estimated temporal and spatial distributions of additional housing demand attributable to each of these projects. It will be seen that:

- Total additional housing demand in the Mudgee SLA attributable to the projects is approximately 658 dwelling units. It will be noted that the final housing effect of the development projects is in the range estimated in Table A.1, derived from relationships estimated for the Wilpinjong Mine;
- This additional dwelling unit demand will be generated in the Mudgee SLA over the period 2006/07-2020/21. Of the 658 additional dwellings likely to be required, it will be noted that some 321 dwellings (or about 49%) will be required in the first five-year period 2006/07-2011/12. A further 243 dwellings (or approximately 37%) will be required over the period 2011/12-2015/16; and the balance of 94 (or about 14%) of the additional dwelling units required will be demanded over the period 2016/17-2020/21;
- Some 515 dwelling units (or approximately 78%) of the additional housing demand in the SLA will be required in the Mudgee township;
- 112 dwelling units (or approximately 17%) of the additional housing demand in the SLA will be required in the Gulgong township;
- The balance of some 30 dwelling units (or about 5%) of the additional housing demand in the SLA will be required in the rural areas.

2.2 LONG-TERM RESIDENTIAL DEVELOPMENT BASE TRENDS IN THE MUDGEE AND RYLSSTONE SLAS

An analysis was made of historic trends in dwelling unit approvals for the Mudgee and Rylstone SLAs, utilising ABS data from 1991/92 to 2004/05. The results are shown in Figure 2. It can be seen that :-

- For Mudgee SLA, the base trend in dwelling unit approvals indicates that from 1991/92 to 2005/06 there has been a marginal decline in annual approvals (from 111 per annum in 1991/92-1995/96 to 108 per annum in 1996/97-2000/01 to 93 per annum in 2001/02 -2005/06). This is forecast to stabilise in 2006/07-2010/11 to 100 dwelling unit approvals per annum, and projected to increase to 110 dwelling unit approvals per annum in the five year period 2011/12 - 2015/16 and continue to progressively increase to 140 dwelling unit approvals per annum in the five year period 2026/27-2030/31 (refer Figure 2, Table C.13);

- For Rylstone SLA the base trend shows consistent historic growth in dwelling unit approvals (from 9 dwelling unit approvals per annum in 1991/92-1995/96 to 12 dwelling unit approvals per annum in 1996/97-2000/01 to 18 dwelling unit approvals per annum in 2001/02-2005/06). Growth in dwelling unit approvals is projected to continue to increase for the foreseeable future (to 25 dwelling unit approvals per annum in 2006/07-2010/11 to 30 dwelling unit approvals per annum in 2011/12-2015/16 to 45 dwelling unit approvals per annum in the period 2026/27-2030/31 (refer Figure 2, Table C.13).

2.3 CONJOINT EFFECT OF DEVELOPMENT PROJECTS ON RESIDENTIAL DEMAND IN THE MUDGEES AND RYLSLONE SLAS

The housing effects of the development projects identified in Section 2.1 were added to the base trends described in Section 2.2. The results are shown in Figure 2 and Table C.13. It can be seen that :-

- Additional dwelling unit demands attributable to the development projects are likely to be confined to the Mudgee SLA in the Shire;
- Within the Mudgee SLA the impact of the development projects will be approximately 64 dwelling unit approvals per annum in the period 2006/07-2010/11, 48 dwelling unit approvals per annum in the period 2011/12-2015/16 and 19 dwelling unit approvals per annum in the period 2016/17-2020/21;
- The conjoint effects of additional housing demands generated by the development projects indicate that total housing demand in the Mudgee SLA is projected to increase to 164 dwelling unit approvals per annum in 2006/07-2010/11, 158 dwelling unit approvals per annum in 2011/12-2015/16 and 139 dwelling unit approvals per annum in 2016/17-2020/21;
- For the Shire as a whole, residential development demand is forecast to rise from 111 dwelling unit approvals per annum in 2001/02-2005/06 to about 188 dwelling unit approvals per annum over the period 2006/07-2015/16 and about 172 dwelling unit approvals per annum over the period 2016/17-2025/26, increasing to approximately 185 dwelling unit approvals per annum in the period 2026/27-2030/31;

In summary, the overall effect of the development projects on housing demand in the Mudgee SLA will be to lift projected dwelling unit approvals from 1,650 over the 15-year period 2006/07-2020/21 to exceed 2,300, an increase of approximately 40% over the base residential housing demand in the period.

2.4 HOUSEHOLD AND POPULATION PROJECTIONS TAKING ACCOUNT OF THE DEVELOPMENT PROJECTS

The overall effects of the development projects on projected households and population have been assessed. The results are shown in Table Set B. It will be seen that:-

- Total dwelling stock is projected to increase for all designated local areas in the Shire for the foreseeable future. In particular (refer Table B.2):-
 - Total dwelling stock in the Mudgee township is projected to increase from 3,610 dwelling units in 2001 to 4,960 dwelling units in 2016 and 6,220 dwelling units in 2031;
 - In the Gulgong township the total dwelling stock is projected to increase from 850 dwelling units in 2001 to 1,000 dwelling units in 2016 to 1,100 in 2031;
 - In the rural areas balance in the Mudgee SLA total dwelling stock is projected to increase from 3,480 dwelling units in 2001 to 3,940 dwelling units in 2016 to 4,500 dwelling units in 2031;
 - In the Rylstone SLA total dwelling stock is projected to increase in the Rylstone township from 320 dwelling units in 2001 to 360 dwelling units in 2016 to 440 dwelling units in 2031;
 - In the Kandos township the dwelling stock is projected to remain steady at 680 dwelling units over the period 2001–2016 and to increase to 700 dwelling units by 2031;
 - In the rural areas balance total dwelling stock is projected to increase from 1,060 dwelling units in 2001 to 1,370 dwelling units in 2016 to 1,870 dwelling units in 2031.
- Households are projected to increase in all designated local areas in the Shire in the foreseeable future. In particular (refer Table B.3):-
 - In the Mudgee township resident households are projected to increase from 3,330 in 2001 to 4,610 in 2016 to 5,880 in 2031;
 - In the Gulgong township resident households are projected to increase from 760 in 2001 to 920 in 2016 to 1,020 in 2031;
 - In the rural areas balance (Mudgee SLA) resident households are projected to increase from 2,650 in 2001 to 3,080 in 2016 to 3,580 in 2031;
 - In the Rylstone township resident households are projected to increase from 260 in 2001 to 330 in 2016 to 410 in 2031;
 - In the Kandos township resident households are projected to increase from 590 in 2001 to 600 in 2016 to 630 in 2031;
 - In the rural areas balance (Rylstone SLA) resident households are projected to increase from 690 in 2001 to 930 in 2016 to 1,330 in 2031.
- The resident population is projected to increase in all designated local areas in the Shire in the foreseeable future with the exception of the Kandos township (refer Table B.1):-
 - In the Mudgee township the resident population is projected to increase from 8,930 persons in 2001 to 11,470 persons in 2016 to 14,070 persons in 2031;
 - In the Gulgong township the resident population is projected to increase from 2,080 persons in 2001 to 2,430 persons in 2016 to 2,620 persons in 2031;

- In the rural areas balance (Mudgee SLA) the resident population is projected to increase from 7,340 persons in 2001 to 8,270 persons in 2016 to 9,330 persons in 2031;
- In the Rylstone township the resident population is projected to increase from 700 persons in 2001 to 860 persons in 2016 to 1,040 persons in 2031;
- In the Kandos township the resident population is projected to decrease from 1,360 persons in 2001 to 1,230 persons in 2016. It is projected to stabilise at approximately 1,220 persons over the period 2031–2026, and to marginally increase to 1,240 persons by 2031;
- In the rural areas balance (Rylstone SLA) the resident population is projected to increase from 1,810 persons in 2001 to 2,270 persons in 2016 to 3,190 persons in 2031;
- The overall resident population of the Mudgee SLA is projected to increase from 18,350 persons in 2001 to 22,170 persons in 2016 to 26,020 persons in 2031;
- The overall resident population of the Rylstone SLA is projected to increase from 3,870 persons in 2001 to 4,360 persons in 2016 to 5,470 persons in 2031;
- The overall resident population of the Shire is projected to increase from 22,220 persons in 2001 to 26,530 persons in 2016 to 31,490 persons in 2031;

2.5 PROJECTED CHANGES IN THE AGE STRUCTURE OF THE RESIDENTIAL POPULATION

Projected changes in the age structure of the residential population have been analysed. The results are shown in Table Set D and Figure 3. It was found that:-

- The infant population (children aged 0-4 years) is projected to be stable for the Mudgee township over the period 2001-2016 and to fall thereafter in the period 2016-2031 (refer Table D.1). For the Shire as a whole, the infant population is projected to progressively fall between 2001 and 2016 (from approximately 1,530 children in 2001 to 1,520 in 2016 and 1,390 in 2031). Further detailed results by designated local area are shown in Table D.1;
- For the Mid-Western Region Shire as a whole, the primary school age population (children aged 5-12 years) is projected to fall from 2,700 children in 2001 to 2,670 by 2016 and 2,410 by 2031. Further detailed results by designated local area are shown in Table D.2;
- For the Shire as a whole, the secondary school aged population is projected to be stable over the period 2001-2016 (at approximately 2,000-2,010 persons). After 2016, the secondary school aged population is projected to marginally fall (from 2,010 persons in 2016 to 1,810 persons by 2031). Further detailed results by designated local area are shown in Table D.3;
- For the Shire as a whole, the tertiary education/training age population (persons aged 19-24 years) is projected to progressively increase during the forecast period (from 1,260 persons in 2001 to 1,440 in 2016 to 1,610 in 2031). Further detailed results by designated local area are shown in Table D.4;
- Projections for the Shire indicate that the young adult population (persons aged 25-39 years) is projected to progressively fall during the forecast period (from 4,200 persons in 2001 to 4,080 in 2016 to 3,680 in 2031). Further detailed results by designated local area are shown in Table D.5;

- The projections indicated that the Shire's middle-aged population (persons aged 40-64 years) is projected to significantly increase during the forecast period (from 7,400 persons in 2001 to 9,940 in 2016 to 13,290 in 2031). Further detailed results by designated local area are shown in Table D.6;
- Projections of the senior population for the Shire (persons aged 65-79 years) indicate that this population group is projected to significantly increase during the forecast period (from 2,390 persons in 2001 to 3,390 in 2016 to 4,610 in 2031). Further detailed results by designated local area are shown in Table D.7;
- Projections of the Shire's population aged 80 years and over (termed "frail aged") indicate that this population group is projected to significantly increase during the forecast period (from 740 persons in 2001 to 1,480 in 2016 to 2,690 in 2031). Further detailed results by designated local area are shown in Table D.8.

In summary, the analysis and projections have indicated that the Shire's population is projected to age, as well as increase in numbers, over the forecast period. In particular:-

- The infant population (children aged 0-4 years), which at the 2001 census comprised 6.9% of the Shire's population, is projected to fall to 5.7% by 2016 and 4.4% by 2031;
- The primary school aged population (children aged 5-12 years) is projected to fall from 12.2% of the Shire's population in 2001 to 10.1% in 2016 and 7.7% by 2031;
- The secondary school aged population (persons aged 13-18 years) is projected to fall from 9% of the Shire's population in 2001 to 7.6% in 2016 and 5.7% by 2031;
- The tertiary education training aged population (persons aged 19-24 years) is projected to increase from 5.7% of the Shire's population in 2001 to 5.4% in 2016 and 5.1% by 2031;
- The young adult population (persons aged 25-39 years) is projected to fall from 18.9% of the Shire's population in 2001 to 15.4% in 2016 and 11.7% by 2031;
- The middle-aged population (persons aged 40-64 years) is projected to increase from 33.3% of the Shire's population in 2001 to 37.5% in 2016 and 42.2% by 2031;
- The senior aged population (persons aged 65-79 years) is projected to increase from 10.8% of the Shire's population in 2001 to 12.8% in 2016 and 14.6% by 2031;
- The population aged 80 years and over (termed "frail aged") is projected to increase from 3.3% of the Shire's population in 2001 to 5.6% in 2016 and 8.5% by 2031.

2.6 GROSS RESIDENTIAL LAND REQUIREMENTS TAKING ACCOUNT OF THE DEVELOPMENT PROJECTS

The residential land requirements taking account of the development projects have been assessed for the designated local areas in the Shire. The results shown in Table E.1 indicate the following :-

- Residential allotment demand is currently estimated at 71 allotments per annum in the Mudgee township. Demand is projected to rise sharply in 2006/07-2010/11 and then to ease down to 126 allotments per annum in 2011/12-2015/16 and to 109 allotments per annum over the period 2016/17-2020/21 and to 99 allotments per annum over the period 2021/22-2025/26 prior to increasing to 107 allotments per annum in 2026/27-2030/31;
- In the Gulgong township residential allotment demand is projected to increase sharply from approximately 5 allotments per annum at present (2001/02 – 2005/06) to 17 allotments per annum over the period 2006/07–2015/16 before reducing to approximately 9 allotments per annum in 2016/17 – 2020/21 and 7 allotments per annum over the period 2021/22-2030/31;
- In the rural areas balance (Mudgee SLA) residential allotment demand is projected to steadily increase from 32 allotments per annum in 2001/02-2005/06 to 38 allotments per annum in 2006/07–2010/11 to 41 allotments per annum in 2011/12-2015/16 and progressively increase 49 allotments per annum by 2026/27-2030/31. It should be noted that, as identified in Council's Rural Strategy, the primary objective in the rural zones is to promote agriculture. The Rural Strategy identifies that there is vacant land within the small rural holding zone that may be developed for the purpose of dwellings. Council will need to closely monitor this demand and supply and implications for residential land supply in the town areas;
- In the Rylstone township residential allotment demand is minimal but is projected to steadily increase from 3 allotments per annum in 2001/02-2005/06 to 4 allotments per annum in 2006/07-2010/11 and 5 allotments per annum in the period 2011/12 – 2020/21 and to 7 allotments per annum over the period 2026/27 – 2030/31;
- In the Kandos township the demand for residential land is negligible over the forecast period to 2010/11 and minimal (approximately 1 allotments per annum) thereafter to 2030/31;
- In the rural areas balance (Rylstone SLA) residential land demand is projected to steadily increase from approximately 18 allotments per annum over the period 2001/02-2005/06 to 29 allotments per annum over the period 2011/12-2015/16 to 44 allotments per annum by 2026/27-2030/31;
- For the Shire as a whole the effect of the development projects on residential land requirements is that current allotment demand estimated at approximately 129 allotments per annum (2001/02-2005/06) is projected to increase sharply to approximately 220 allotments per annum over the period 2006/07 – 2015/16 and to stabilise at approximately 200 allotments per annum over the period 2016/17 – 2025/26 prior to increasing to 215 allotments per annum over the period 2026/27 – 2030/31.

2.7 CURRENT RESIDENTIAL LAND SUPPLY IN THE MUDGEE AND GULGONG TOWNSHIPS

Information on the current state of residential land supply in the Mudgee and Gulgong townships was provided by Council. No comprehensive information was available for the Rylstone SLA. The information in relation to Mudgee and Gulgong is provided in Table E.2. It can be seen that:-

- At October 2005 total existing and likely residential supply in the Mudgee township was estimated at approximately 1,218 allotments. This was comprised of 493 allotments on both developed and zoned land. The balance of 725 allotments comprised 675 allotments likely to be yielded through rezoning of land to residential purposes currently underway through the interim LEP;
- At October 2005 total existing, approved and likely residential supply in the Gulgong township was estimated at 478 allotments comprising 333 allotments in land developed or currently zoned for residential purposes, and a further 145 allotments likely to be yielded in land that has been rezoned to residential through the interim LEP.

2.8 ADDITIONAL LAND SUPPLY REQUIREMENTS AT MUDGEE AND GULGONG

An assessment was made of the projected residential land demand-supply-balance taking account of existing supply and projected demands in the Mudgee and Gulgong townships. The results are set out in Table E.3. It can be seen that:-

- The estimated allotment supply for the Mudgee township at 30 June 2006 is 1,165 allotments after making adjustments for ongoing take up of residential land in the period October 2005 – June 2006;
- The estimated 15 year residential allotment demand at 2006/07 is 1,855 allotments for the Mudgee township (refer Table E.3, column 5);
- Therefore at 2006/07 it is likely that there will be an allotment supply deficiency in the Mudgee township of 690 allotments taking account of existing, approved and likely-to-be-approved supply through the interim LEP. If this supply is met in 2006/07, then a further 495 allotments will be required by 2011/12 to meet ongoing residential land demand in the Mudgee township, and a further 535 allotments will be required in 2016/17 in the township. Thus from 2006/07 to 2016/17 a total of 1,720 additional residential allotments will be required to meet projected residential land requirements for the township in this period.
- For the Gulgong township a 15 year allotment demand at 2006/07 is estimated to be approximately 215 allotments (refer Table E.3, column 5). However, no additional land is required for residential development to meet the township requirements and at 2006/07 some 259 allotments would still remain in the supply reserve after allowing for a 15 year residential land allocation. No additional residential land supply is required at Gulgong over the period 2006/07 – 2016/17 taking account of a 15 year demand supply. The current analysis indicates that by 2016/17 some 189 allotments would remain in the residential land supply reserve.

2.9 IMPACTS ON RENTAL HOUSING STOCK

An assessment was made of the likely impacts of the development projects on rental housing stock in the Mudgee SLA. No detailed inventory is available on the stock of occupied and vacant rental housing stock in the Mudgee SLA at the present time (September/October 2005). However, estimates provided by Council indicate that there is only an approximate 2% vacancy rate in the rental housing market in the Mudgee SLA.

The Census of Housing and Population indicated that there were approximately 1,580 occupied residential rental units in the Mudgee SLA at June 2001. This amounted to 23.5% of the occupied residential dwelling stock in 2001. An analysis of the long term trend in residential rental accommodation in the Mudgee SLA has found that over the period 1991–2001 there has been a long term upward trend in the proportion of occupied dwellings that are utilised as rental accommodation (from 22.8% of occupied dwelling stock in 1991 to 23.5% in 2001).

It is therefore conservatively estimated that by 2006 Census no less than 24% of occupied dwellings in the Mudgee SLA will be utilised as rental dwelling stock. On this basis the future rental dwelling stock for the Mudgee SLA has been projected, linked to the projections for occupied dwellings in the SLA (refer Table F.1). Occupied rental dwelling stock is projected to rise in the Mudgee SLA from approximately 1,580 dwelling units in 2001 to 1,720 units in 2006, rising progressively to 2,520 units by 2031.

Based on the estimates by Council the current vacant rental dwelling stock in the Mudgee SLA was only approximately 30 dwelling units in 2001, and is projected to be approximately 40 dwelling units by 2006 assuming that a 2% vacancy rate is still maintained at this stage.

The housing rental requirements of the development projects are set out in Table F.1. The analysis indicates that there is likely to be a requirement for approximately 160 dwelling units as rental stock attributable to the projects (refer Table F.1).

Given the current tight rental housing market in the Mudgee SLA the development projects are likely to trigger demand for additional rental housing stock. Over the period 2006–2021 at least 160 dwelling units will be required to meet the additional demands likely to be generated by the development projects. This is likely to represent the lower estimate of additional rental housing requirements in the Mudgee SLA for this 15 year period. The provision of these dwelling units (that ie, the 160 additional units) would still leave the market with a very low vacancy rate and prone to excessive rental pressures and being pushed to capacity constraints in the future.

Column 6 in Table F.1 shows the identified shortfall in rental housing stock for the Mudgee SLA. The lower estimates for the period 2006–2021 are targeted to meet the additional requirements likely to be generated by the development projects. The higher estimates are targeted to increase the vacancy level in the rental housing market to 4% which more closely reflects an industry mean in regional and major cities. The analysis indicates that over the period 2006–2031 an additional 250 to 430 rental housing units are likely to be required in the Mudgee SLA to meet projected demands.

3 RECOMMENDATIONS

It is recommended that Council undertake the necessary land capability, structure planning and development planning assessments to identify and provide a strategic framework for additional residential land requirements together with road access, open space, education and ancillary servicing requirements to accommodate identified residential demands for the Mudgee township over the period 2006/07–2030/31.

It is recommended that provision be made for no less than 1,720 additional residential allotments capable of being progressively released in three phases with the first release phase to occur as close as possible to 2006/07 and to provide for no less than 690 allotments. A second release phase should occur no later than 2011/12 and this should provide for no less than 495 allotments. A third release phase should occur no later than 2016/17 and this should provide for no less than 535 allotments.

It is recommended that Council regularly monitor the supply and demand of residential housing accommodation in the Shire. Is further recommended that Council publicly release information on available residential properties and on the vacancy rate to the development industry. As a matter of policy it is recommended that the Council seek to facilitate the development industry to ensure that a vacancy rate for rental housing accommodation does not fall below 2% of existing rental stock.
